1 Abstract, intended audience and pre-requisites

The Profitbase Planner Configuration and Operation series consist of several documents dealing with the configuration and operation of individual Planner modules and functions.

Planner modules are operational input modules that contributors to the plan processes use to prepare the Profit & Loss (P&L) of their respective areas of responsibility. Different modules will typically cover parts of the P&L such as sales, personnel, cost, etc.

The modules are accessed from the Plan overview workbook of a given version and the input provided by the contributors are transformed into P&L transactions and fed back to the Plan overview workbook resulting in a P&L work-in-progress overview.

The intended audience of this document is implementation partners configuring the solution initially and solution administrators responsible for operating it thereafter.

This document assumes that a Profitbase Planner solution has been deployed and that access to this solution is given to the reader.

2 Common functionality

Changes made to input sheets are not saved automatically. To save changes, click the “Save” button. The “Save” button will remain disabled until a change has been made.

To undo all unsaved changes, click the “Refresh” button.

To undo the last of a series of unsaved changes, click the Ctrl and Z keys simultaneously.

To insert new rows to an input sheet, right-click in the sheet and select one of the available options:

- Insert row
- Insert row below
- Insert copy of row

To delete a row from an input sheet, right-click the row in question and select:

- Delete row

Inserting and deleting rows can be controlled as part of the configuration, see [Control row context menu options \(right-click\)](#).

Please note, that although the row is no longer visible in the input sheet, the change must be committed using the “Save” button or undone using the “Refresh” button.

In input sheets, editable fields are distinguished from non-editable fields by fill color, editable fields have by default a white fill color.

In setting tables, a so-called ranked input concept is often used for the dimensional context. Ranked input allows for a high-level selection of dimensional nodes and gives the opportunity to alter the rank or specificity between rows.

A ranked input cell can be set through the ranked input selector by clicking the cell value (cell will display 3 dots if no value is set):

The ranked input selector will display the dimensional hierarchy and allows for the selection of a high-level dimensional node. The selection of a high-level node implies that the setting applies to all sub-ordinate nodes.

Select node and click “OK”.

Click “Cancel” to leave the selector without selecting.

In a table containing multiple rows, the rank or specificity of individual rows can be altered by moving the row up (decrease specificity) or down (increase specificity) by right-click the row in question and selecting:

- Move up
- Move down

The less specific the setting is, row should be high up in the table. The more specific the setting is, the further down in the table the row should reside.

3 Principle of operation

Driver based models

The driver-based module uses as the name suggests a driver-based principle.

Multiple models consisting of measures may be defined. Common to all models is the definition of one of the measures as the driving measure for that model.

Product sales

Sales main driver

Stavanger (NOK) Sales

	Product	Market	Measure	FctActL12M	Act.YTD 2020	For YTG 2020	2020	Jan 20	Feb 20	Mar 20	Apr 20	May 20	Jun 20	Jul 20	Aug 20	Sep 20	Oct 20	Nov 20	Dec 20	
1	Total		\$	937	847	955	1 802	120	111	108	123	985				273	307	171	205	
2	Profitways DIVision Core	Norway	Sales qty	\$	652	562	578	1 140	120	111	108	123	100	0	0	0	165	186	103	124
3	Profitways DIVision Core	European Union	Sales qty	\$	23	23	377	400	0	0	0	0	23	0	0	0	108	121	67	81
4	Profitways EDM*	Norway	Sales qty	\$	35	35	0	35	0	0	0	0	35	0	0	0	0	0	0	0
5	Profitways EDM*	European Union	Sales qty	\$	56	56	0	56	0	0	0	0	56	0	0	0	0	0	0	0
6	Profitways OutBack	Norway	Sales qty	\$	78	78	0	78	0	0	0	0	78	0	0	0	0	0	0	0
7	Profitways OutBack	European Union	Sales qty	\$	89	89	0	89	0	0	0	0	89	0	0	0	0	0	0	0
8	Profitways OutBack	U.S.A.	Sales qty	\$	4	4	0	4	0	0	0	0	4	0	0	0	0	0	0	0

Examples of driving measures may be Sales quantity, Sales volume, FTE (Full Time Equivalents) and so on.

Click the \$ icon to view the P&L transactions generated from the row in question.

Additional measures make up the detail model and may take direct input, be lookups to assumptions and calculations of other measures.

Click the icon for the row in question to view the detailed model.

Measures will render as rows of the model, for example:

												Use default	Close

A year-total input is automatically spread to the plan months of that particular year. The total is spread according to the monthly distribution function tied to the product and market as follows:

- If a specific monthly input has been made by the user, the distribution inherent in the monthly values is used as a distribution key.
- If not, then if a central distribution key is tied to the account, this distribution will be used
- If none of the above applies, the total is spread evenly over the plan months

Please refer to [Distribution keys](#) for details on distribution keys.

Measures that are **lookup to assumptions** are identified by the  icon.

Note that it is possible to click the icon to view the assumption values and to override the assumption values and reset to the default if overridden if the model allows.

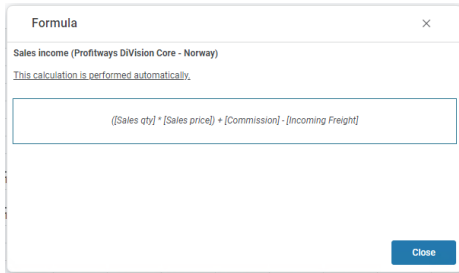

Assumption													X	
Sales price (Profitways DIVision Core - Norway)														
Default value														
2021	Jan 21	Feb 21	Mar 21	Apr 21	May 21	Jun 21	Jul 21	Aug 21	Sep 21	Oct 21	Nov 21	Dec 21		
190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000		
Effective value														
2021	Jan 21	Feb 21	Mar 21	Apr 21	May 21	Jun 21	Jul 21	Aug 21	Sep 21	Oct 21	Nov 21	Dec 21	Source	
190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	190 000	Default	
												Override	Use default	Close

An overridden assumption is marked by a blue left border indication: 

Please refer to [Assumptions](#) for details on assumptions.

Measures that are **calculations** are identified by the  icon.

Note that it is possible to click the icon to reveal the formula and a formula description if set:

A formula that is not executed automatically but requires the click on the “Recalculate” button is marked with a red left border indication: 

Please refer to [Define calculations](#) for details on calculations.

Dimensionality

The basic dimensionality of the driver based module is department, product, and market. Extra dimensionality may be added:

- Supplier
- Project
- Activity
- Counterpart
- Dimensions Dim1 to Dim4

For details on defining dimensionality, refer to [Define dimensionality](#).

Historical references

The models are preset with the last 12 months of actuals.

In addition to the above, up to 5 historic reference columns may be added as needed.

For details on defining historical reference columns, refer to [Define historical reference columns](#).

Planning horizon

The planning time horizon is controlled in the Finance Settings workbook:

This time horizon applies to all input modules.

Long-term planning (beyond this year and next year) allows for a year-total input only. When saving the plan, the long-term year-totals are automatically distributed to months using the distribution that is relevant to the next year's plan for the corresponding dimensionality.

Note that there is also a period filter setting that you may want to consider if you change the plan horizon. The period filter setting control which period filter will be available and which one will be the default, please refer to [Period filters](#).

Plan roll forward actions

Source data

The input module will be updated with source data when rolling forward.

Any new combinations that exist in the driver source fact data will automatically be processed into the input module and their last 12 months actuals updated.

Please refer to [Data management](#) for details.

Long term plan

If long-term planning is done, the year-total for next-year+1 will be distributed to monthly values using next-year's distribution when rolling over to a new year.

4 Model configuration

Driver based models are configured in the "Driver based modelling" workbook and the "Models" page.

4	FreightIn	Incoming Freight	Incoming Freight

Create a new input model

To create a new model, click the "New ..." button.

In the following dialogue, enter a model id and a model default name.

The 'New' dialog box is titled 'New' and contains the following elements:

- Create new model** section:
 - ID (a-z, 0-9):
 - Name:
- Copy from existing model** section:
 - A dropdown menu for selecting an existing model.
 - Copy model and settings
 - Copy data
- Buttons: and

If relevant, select an existing model to copy from and select whether to copy only the model and settings or the input data as well.

Click “Confirm”.

The new model is created and displays in the filter list at the far left.

Process an input model

Processing a model will re-generate any P&L transactions from the model. This should be done if changes have been made to the model, its assumptions or output processing definitions such as account mapping.

Processing is done by clicking the “Process” button.

Note that processing is a potentially time-consuming operation depending on the amount of input data associated with the model.

Delete an existing input model

An input model can be deleted by clicking the “Delete ...” button.

In the following dialogue, select from the following options:

- “Delete data” - deletes any input data associated with the model
- “Delete model and settings” – deletes the complete model, its settings, and any associated input data.

The 'Delete' dialog box is titled 'Delete' and contains the following elements:

- Model name: (ForecastSalesWorkbook) - Product sales
- Text: Make selection and click Confirm.
- Text: Checking the Delete model and settings option will delete the complete model including data.
- Options:
 - Delete data
 - Delete model and settings
- Buttons: and

Note that deleting a model is a potentially time-consuming operation depending on the amount of input data associated with the model and the model will be processed to delete any associated P&L transactions.

Publish an input model

To publish a model, check the “Published” checkbox and click the “Save” button.

Conversely, to set a model offline, uncheck the “Published” checkbox and click the “Save” button.

A model that is not published, will not be editable by users accessing the model from the “Plan Overview” workbook.

It is, however, possible to open an unpublished model from the “Open” button:

Edit input model properties

Select the model to edit in the filter list at the far left.

The input models are defined in the following screen:

Column	Description
Measure	The MeasureID. Mandatory. Select from list. For details on adding a new measure, refer to Define measures .
Description	The measure's default description.
Description EN	The measure's English translation.
Description NO	The measure's Norwegian translation.
Driver	The measure is the driver (checked). Note that while a single driver per model is most common, more than one measure per model can actually be a driver.
Input	The measure is open for input (checked) or not (unchecked). Note that if the measure is also a lookup (checked), the measure will not be open for input until the user has chosen to override the default lookup assumption value.
Lookup	The measure attains its value from a lookup assumption. For details on maintain assumption settings, refer to Assumptions . Note that if the measure is also open for input (checked), the user will have the opportunity to override the default lookup assumption value. A lookup measure will be read-only if not open for input.
Calc	Read-only indicator that the measure is calculated (checked) or not (unchecked). A measure that is a calculation is read-only. Note that calculations are performed in the sequence indicated by the Sorting column.
Calc. order	For back-end (sql) calculations, the default order of calculation is the sorting, i.e. that it is assumed that no measure with a low sorting rely on a calculation with a higher sorting (further down in the model). If this is not the case, the Calc order may be used to override this sequence.
Set	Action link that opens a calculation pop-up in which calculation formulae and optional verbal calculation explanations are maintained. For details on defining calculations, refer to Define calculations .
Total across periods	Defines how year-totals are calculated from the monthly values (Sum Average). Select from list. Note that the average is an arithmetic average.
Rollup	Defines how the measure is to be rolled up to aggregate organizational levels (Sum Average). Select from list. Note that the average is an arithmetic average.
Format	The number display format. Select from list.
Style	The style of the measure row. Select from list.
Sorting	Sort sequence. Controls the display order and also the default calculation sequence.
Comment	Optional comment.
Excl. from trans.	Input models are diverse and often contain measures that are not relevant as transactions, for example pure visual calculations. To avoid irrelevant measures from being processed as transactions, check the "Excl. from trans." Column for the measures in question.
Hist. fact source	Displays the source of the historic facts for the measure. Default is empty meaning it is manually input in the Source data workbook. Alternatively: <ul style="list-style-type: none"> - Driver based external fact (imported from external source) - General ledger external fact (based on a selection of ledger data) - Actualized driver based plan data (based on plan input for periods that are actualized as the plan rolls forward) <p>The Hist. fact source for a measure is defined in the Measures tab (see Define measures).</p>

To delete a measure from a model, right-click the measure and select one of the options:

- Delete from data – the measure will remain in the model, but any input data associated with it will be deleted.

- Delete from model (incl data) – the measure is deleted from the model and so is the input data associated with it.

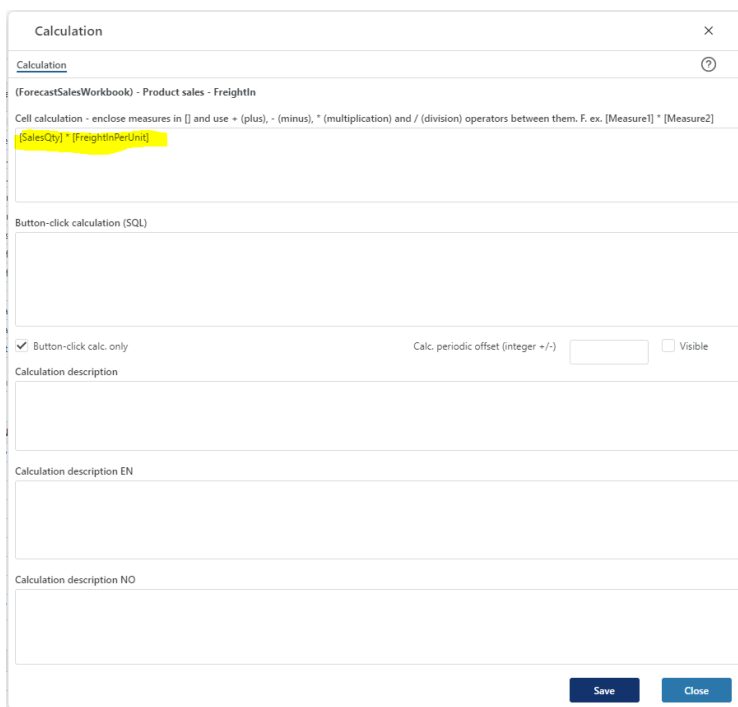

Unless the changes made are minor (change style or format), the model changes should be applied. This is done by clicking the “Apply ...” button that will reveal a dialogue in which one can opt for updating any historical reference content by checking the “Update L12M actuals”:

If the changes made also will reflect on the P&L transactions produced, the model should also be processed. This is done by clicking the “Process ...” button.

Define calculations

Access the calculation pop-up by clicking the “Set” action link for a measure in the input model setup to reveal the following dialogue:

There are two types of calculations:

- Cell-calculations: simple arithmetic calculations (+ - * /) between measures of a model. These calculations are performed automatically, as-you-type, when editing data in the input model.

Note that when defining the cell-calculation formula, the measures are defined by the measure id enclosed in square brackets, for example [SalesQty] * [SalesUnitPrice].

- Button-click calculations: more complex calculations involving for example conditionals. Such calculations are defined as sql statements and will not calculate automatically, as-you-type, when editing data in the input model. These calculations will require the click of a button to execute, specifically the “Recalculate” button.
 - o For button-click calculations it is possible to set a periodic offset on the calculation, for example if measure a for a period should be calculated based on measures b and c for an offset period (+ or -). This offset can extend to the last 12 month actual periods.

Note that the entire calculation will be performed based on values on the relevant offset period. So for example if the offset was -1, the calculated value for measure a for period 2 will be based on measures b and c for period (2-1) = 1.

Button-click calc. only Calc. periodic offset (integer +/-) Visible

A measure defined to be a button-click calculation can also be hidden by un-ticking the Visible check-box.

In the calculation dialogue, one can also enter more elaborate descriptions using the “Calculation description” fields.

Note that the calculations that are button-click, are indicated with a red left border and that the calculation formula (cell-calculation only) and calculation description will be displayed when clicking the calculation symbol.

Measure	FctAct1	Act YTD	2020	Jan 20	20	Nov 20	Dec 20	Comment
1 Sales qty	#	652	562	578	1 140	120		
2 Sales price	#	0	0	185 000	185 000	0		
3 Incoming freight per unit	#	0	0	0	0	0		
4 Incoming Freight	#	0	0	0	0	0		
5 Commission %	#	0	0	1.0 %	1.0 %	0		
6 Commission	#	0	0	1 063 107	1 063 107	0		
7 Sales income	#	0	0	107 373 821	107 373 821	0		
8 Costs %	#	0	0	87.9 %	87.9 %	0		
9 Costs	#	0	0	71 940 460	71 940 460	0		
10 Outgoing Freight	#	0	0	0	0	0		
11 Discount %	#	0	0	2.0 %	2.0 %	0		
12 Discount	#	0	0	-2 126 214	-2 126 214	0		
13 Gross margin	#	0	0	33 307 147	33 307 147	0		

Make sure to validate that the calculations used actually work before publishing the model. This can be done using the “Check calc.” button:

Any errors will be reported and must be corrected. The following shows a no-errors situation:

Define dimensionality

The dimensionality of a model is defined in the following table:

Measure	Measure	Description	Description EN	Description NO	Driver	Input
1	SalesQty	Sales qty	Sales qty	Antall solgte enheter	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
2	SalesUnitPrice	Sales price	Sales price	Ehelspris	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3	FreightInPerUnit	Incoming freight per unit	Incoming freight per unit	Inng. frakt per enhet	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4	FreightIn	Incoming Freight	Incoming Freight	Inng. frakt	<input type="checkbox"/>	<input type="checkbox"/>
5	CommissionPct	Commission %	Commission %	Kommisjon %	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6	Commission	Commission	Commission	Kommisjon	<input type="checkbox"/>	<input type="checkbox"/>
7	Sales	Sales income	Sales income	Salgsinntekt	<input type="checkbox"/>	<input type="checkbox"/>
8	CostOfGoodsSoldPct	Cogs %	Cogs %	Vareforbr. %	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9	CostOfGoodsSold	Cogs	Cogs	Vareforbruk	<input type="checkbox"/>	<input type="checkbox"/>
10	FreightOut	Outgoing Freight	Outgoing Freight	Utg. frakt	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11	SalesDiscountPct	Discount %	Discount %	Rabatt %	<input type="checkbox"/>	<input type="checkbox"/>
12	SalesDiscount	Discount	Discount	Rabatt	<input type="checkbox"/>	<input type="checkbox"/>
13	GrossMargin	Gross margin	Gross margin	Bruttoforjeneste	<input type="checkbox"/>	<input type="checkbox"/>

DimensionColumn	Description	Description EN	Description NO	VisibleInput	Mandatory
1	ActivityID	ActivityID_Name	AktivitetID_Navn	<input type="checkbox"/>	<input type="checkbox"/>
2	CPLegalEntityID	Counterpart	Motpart	<input type="checkbox"/>	<input type="checkbox"/>
3	Dim1	Dim1Name	Dim1Navn	<input type="checkbox"/>	<input type="checkbox"/>
4	Dim2	Dim2Name	Dim2Navn	<input type="checkbox"/>	<input type="checkbox"/>
5	Dim3	Dim3Name	Dim3Navn	<input type="checkbox"/>	<input type="checkbox"/>
6	Dim4	Dim4Name	Dim4Navn	<input type="checkbox"/>	<input type="checkbox"/>
7	MarketID	Market	Marked	<input checked="" type="checkbox"/>	<input type="checkbox"/>
8	ProductID	Product	Produkt	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

The Department dimension is always mandatory whereas the Product and Market dimensions are default and normally mandatory in any model. Product and/or Market can, however, be omitted.

Column	Description
DimensionColumn	The dimension column id. Preset.
Description	The measure's default description.
Description EN	The measure's English translation.
Description NO	The measure's Norwegian translation.
VisibleInput	Indicates whether dimension is visible (checked) or not (unchecked) in the input sheet of the model.
Mandatory	Indicates whether user must select a value from the dimension drop down when adding a row (checked) or not (unchecked) to the input sheet of the model.
Comment	Optional comment

The dimensions are shared between models. If a dimension drop-down list of a certain model should not display a certain member, it can be excluded for that model by clicking the action link in the "DimensionColumn" column to reveal the following dialogue:

Dimension item exclusion

(Sales2) - Consulting - ProductID

Dimension item to exclude	
1	Profitways DIVision Core
2	Profitways EDM?
3	Profitways OutBack

Add dimension members to excluded and click the “Save” button.

For details on dimension management, please refer to [Data management](#).

Define historical reference columns

The last 12 months of actuals will be included for measures where historical data exists.

There is a preset number of historical reference columns to choose from. The historic reference columns of a model is defined in the following table:

The screenshot shows the 'Forecast • 5.0.0.4 | Driver based modelling' interface. The 'Historical reference columns' table is visible, listing columns for historical data. The table has columns: Column Name, Dataset ID, From Date, To Date, Description, Description EN, Description NO, and Visible. One row is shown with 'Historic1' as the Column Name, 'Actual' as Dataset ID, '01/01/2021' as From Date, '12/31/2021' as To Date, 'Actual LY' as Description, 'Actual LY' as Description EN, 'Fak. i fjor' as Description NO, and a checked 'Visible' box.

Column	Description
Column Name	The internal historical reference column id, Historic1, Historic2, Historic3, Historic4 and Historic5. Select from the drop-down list.
DatasetID	The dataset origin for the historical reference data. Select from the drop-down list.
From Date	The start date for the historical reference data
To Date	The end date for the historical reference data
Description	The column default name
Description EN	The column’s English translation
Description NO	The column’s Norwegian translation
Visible	Indicates that the column is visible in the input sheet for the model or not (checked unchecked)

For maintaining source fact data, please refer to [Data management](#).

Define deviation columns

There is a preset number of deviation (calculated) columns to choose from. The deviation columns of a model is defined in the following table:

Budget • 2022 | Driver based modelling profitbase

Column Name	Description	Description EN	Description NO	Visible	Comment
1	L12M	Actuals 12M	Actuals 12M	<input checked="" type="checkbox"/>	
2	YTD	Act. YTD	Act. YTD	<input checked="" type="checkbox"/>	
3	ROY	Plan YTD	Plan YTD	<input checked="" type="checkbox"/>	

Column	Description
Column Name	The internal deviation column id, Deviation1, Deviation2.
Formula	See * below
ColumnName_Description	The column's default name
ColumnName_Description_EN	The column's English translation
ColumnName_Description_NO	The column's Norwegian translation
Visible drivers	Indicates that the column is visible in the driver page or not (checked unchecked)
Format drivers	The number format that the calculated deviation will display in the driver page, select from drop down list.
Visible details	Indicates that the column is visible in the driver details (pop up) page or not (checked unchecked)
Format details	The number format that the calculated deviation will display in the details (pop up), select from drop down list.

*

There are several internal columnids that can be referenced in the formulae:

- **Historic1 to Historic5** – historic reference columns, requires that historic reference columns are configured.
- **YTD** – Year to date (Actuals)
- **ROY** – Rest of year plan (rest of first plan year, that is from plan start to the end of first plan year)
- **TY** – This year (first full plan year, comprised of YTD actuals and ROY plan)
- **NY** – Next year plan (second full plan year)
- **L12M** – Last 12 months (Actuals)
- **N12M** – Next 12 months plan (first 12 months of plan)
- **NYPlus1** – Third full plan year, requires that long term planning is used.
- **NYPlus2** – Fourth full plan year, requires that long term planning is used.
- **NYPlus3** – Fifth full plan year, requires that long term planning is used.
- **NYPlus4** – Sixth full plan year, requires that long term planning is used.
- **NYPlus5** – Seventh full plan year, requires that long term planning is used.

Please note that the internal columnids should be enclosed in [] and that + (plus), - (minus), * (multiplication) and / (division) mathematical operators can be used, for example:

- [NY] – [TY]

If, for example the deviation column is to show This year's budget – Last year's budget, and the two are stored in columns Historic1 and Historic2 respectively, the formula would be:

- [Historic1] – [Historic2]

Select / unselect optional columns

A set of columns are optional related to actuals last 12 months, year to date and plan rest of year. The columns can be named and selected / unselected individually per model:

The screenshot shows the 'Measure' configuration page in Profitbase. It includes a table of measures with columns: Measure, Description, Description EN, Description NO, Driver, Input, Assumption, Calc., Set, Calc. order, Total across periods, Rollup, Format, Style, Sorting, and Set plan proposal. Below the measures table are sections for 'Dimensions' and 'Column selection'.

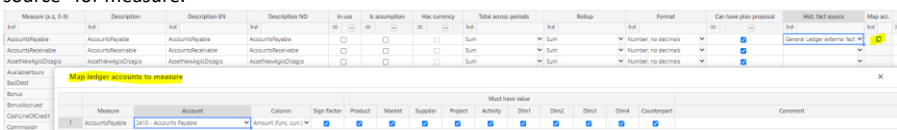

Define measures

A set of measures is included when Planner is deployed. New measures may be added as needed.

Measures are defined in the “Measure” page:

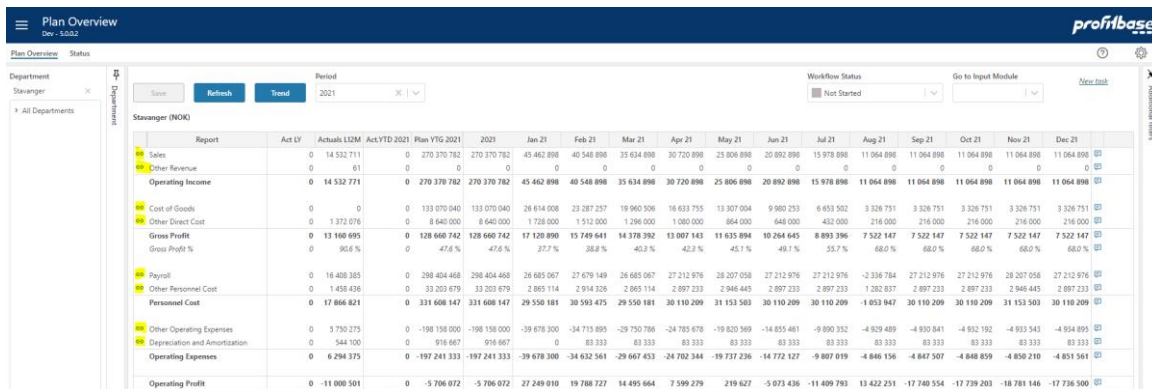

The screenshot shows the 'Measure' configuration page in Profitbase for a budget model. It includes a table of measures with columns: Measure, Description, Description EN, Description NO, In use, Is assumption, Has currency, Total across periods, Rollup, Format, Can have plan proposal, Hist. ref source, and Comment.

Column	Description
Measure	Measure id. Mandatory. <ul style="list-style-type: none"> - Attempts to use special characters when adding a new measure (non a-z, 0-9) will result in an error message. - Attempts to delete a measure that is in use in models and/or assumptions and settings will result in an error message
Description	Default measure name. Optional. The name will typically be set when adding the measure to a model.
EN	English measure name. Optional. The name will typically be set when adding the measure to a model.
NO	Norwegian measure name. Optional. The name will typically be set when adding the measure to a model.
In use	Mandatory, default checked. Indicates whether measure is in use (checked) or not (unchecked). A measure that is not in use, will not be available for selection when adding measures to a model.
Is assumption	Mandatory, default unchecked. Indicates whether measure is an assumption (checked) or not (unchecked). A measure that is not an assumption, will not be available for selection when defining assumptions.
Has currency	Mandatory, default unchecked.

Total across periods	Mandatory, default Sum. Select from list. The value is used for calculating rest of year and next year totals correctly for lookup values (assumptions).
Format	Mandatory, default "Number, no decimals". Select from list. The value is used for displaying lookup values (assumptions) in the correct format when defining assumptions.
Can have plan proposal	Plan proposals can be made for any measure of type input in each model that also has a check in this column. Default is checked (true).
Hist. fact source	Defines where a measure's historical values are sourced from. The following options exist: - (none) : any historical values are input manually in the Source Data workbook. This is the default setting. - Driver based external fact : any historical values are fetched from the driver external fact table (EPM datamart). This source is normally the target for import from external sources using the Data import & export workbook. - General ledger external fact : any historical values are sourced from the finance general ledger table. A link to a pop-up to map accounts to this measure in the "Map acc." column if this option is selected. - Actualized driver-based plan data : When rolling forward, the data that is actualized is kept and can be used as a source for historical values. Actualized data for the last 12 months are kept in the actualized driver-based plan data source.
Map acc.	Link to pop-up where general ledger accounts can be mapped to as source for historical values to the specific measure. The link will only appear if "General ledger external fact" is selected as the "hist. fact source" for measure. 
Comment	Optional comment.
Owned by	"\$System" for measures that initially came with the system. The user id for the user that added the measure for measures added to the solution post-deployment.

Attach module to input report

The module can be attached to the action link button of one or more report lines of the "Plan Overview" report:

Report	Act LY	Actuals LY2M	Actuals YTD 2021	Plan YTD 2021	2021	Jan 21	Feb 21	Mar 21	Apr 21	May 21	Jun 21	Jul 21	Aug 21	Sep 21	Oct 21	Nov 21	Dec 21

7	ABC Group	Other Operati	Account
8	ABC Group	Cost of Goods	Account

Column	Description
Departm.	Source department. Ranked input. Mandatory. Through the use ranked input (high level selection), different modules may attach to a given report line for different part of the department dimension (organization).
Report Line ID	Report line to which input module is to attach. Select from list. Mandatory.
Input module	Input module to attach. Select from list. Mandatory.

Additional input filters (slicers)

Department is a standard filter (slicer). In addition, there is an option to include Project and/or Activity as additional input filters (slicers).

The configuration for this is found in the "Setup" page of the "Input Settings and Administration" Workbook:

Input Settings and Administration
Dev - 5.0.0.2

Input filters

	Filter	Visible	Name	Name EN	Name NO	Comment
1	Project	<input checked="" type="checkbox"/>	Project	Project	Prosjekt	
2	Activity	<input checked="" type="checkbox"/>	Activity	Activity	Aktivitet	

Note that this configuration is global to all input module workbooks and the "Plan Overview" workbook.

Column	Description
Filter	Available filter, limited to Project and Activity

Visible	Makes filter visible (checked) or not visible (unchecked)
Name	The filter's default name as displayed in the workbook
Name EN	The filter's English translation as displayed in the workbook
Name NO	The filter's Norwegian translation as displayed in the workbook

The additional filters appear in the right section of the workbook:

The screenshot shows the Profitbase interface for 'Product sales'. The main area displays a pivot table with columns for 'Product', 'Market', 'ProjectID_Name', 'ActivityID_Name', 'Measure', and 'Sales qty'. The table includes data for 'Total' and 'Profitways Division Core' across various months from 2021 to 2022. On the right side, there is a 'Project' filter pane with options like 'Project A', 'Project B', 'Project C', and 'Project D'. Below the pivot table, there is an 'Account' table with columns for 'Account', '2021', 'Jan 21', 'Feb 21', 'Mar 21', 'Apr 21', 'May 21', 'Jun 21', 'Jul 21', 'Aug 21', 'Sep 21', 'Oct 21', 'Nov 21', and 'Dec 21'.

Period filters

The input module contains a period filter in which (time) periods can be selected. The content of this filter can be configured in the “Period filters” table found in the “Setup” page in the “Input Settings and Administration” workbook:

The screenshot shows the 'Input Settings and Administration' workbook, specifically the 'Setup' page. On the left, there are several checkboxes for different settings, with 'Period filters' checked. On the right, there is a 'Period filters' table with columns for 'Period filter', 'Visible', 'Default', 'Sorting', and 'Comment'.

	Period filter	Visible	Default	Sorting	Comment
1	2021	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		1 This fiscal year
2	2022	<input checked="" type="checkbox"/>	<input type="checkbox"/>		2 Next fiscal year
3	Jan 2021 - Dec 2022	<input type="checkbox"/>	<input type="checkbox"/>		3 Next 12 months
4	2021 - 2022	<input type="checkbox"/>	<input type="checkbox"/>		4 This fiscal year and next fiscal year
5	2023 - 2027	<input checked="" type="checkbox"/>	<input type="checkbox"/>		5 Beyond next fiscal year

Note that this configuration is global to all input module workbooks and the “Plan Overview” workbook.

Column	Description
Period filter	Available filters, preset.
Visible	Makes filter visible (checked) or not visible (unchecked)
Default	Makes it the default period filter
Sorting	Controls the sorting in the filter drop down
Comment	Optional comment

Edit...

Clicking the Edit.. button reveals a pop-up with the option to edit the name and set English and Norwegian translations as well as:

Period button and navigation

The screenshot shows the Profitbase Planner interface with the 'Edit' dialog box open for the 'Product sales' measure. The dialog box contains the following fields and options:

- Description:** Product sales
- Description EN:** Product sales
- Description NO:** Produktsalg
- Access group:** (dropdown menu)
- Row context menu options:**
 - New
 - Delete
 - Delete (act. = 0)
 - Ch. dim.
 - Ch. dim. (act. = 0)
- Periods button
- Navigate directly to details view

The background shows a table of measures and dimensions. The 'Measure' table has 13 rows, and the 'Dimensions' table has 8 rows.

The Periods button is default visible and active. To hide and make inactive, un-tick the “Periods button” option.

By default, the drivers view is loaded and displayed when selecting in the Department dimension. The details view can be viewed per driver combination by clicking the go-to-details icon on the driver-row in question.

In circumstances where there is always just one driver row per department (all non-department dimensions have the default empty member, i.e. #), the “Navigate directly to details view” can be ticked thereby taking the user directly to the details view. This option is by default un-ticked.

Limit access to specific models

By default, the access set up for the Driver based workbook applies to all driver-based models as they all share the same workbook.

If needed, access to an individual model can be limited to a specific access group of the Default category by clicking the Edit button:

Ch. dim. (act. = 0)	Change dimensionality is allowed only if row contains no actuals (true). Available for selection only if "Ch. dim." is true.

5 Settings

Driver based models are configured in the "Driver based modelling" workbook and the "Models" page.

The screenshot shows the Profitbase "Driver based modelling" interface. At the top, there are navigation buttons: Save, Refresh, New..., Open, Apply..., Process, Delete..., and Check calc. Below this, there's a filter for "Product sales" and a "Set name:" dropdown set to "Published". The main area displays a table of measures with columns: Measure, Description, Description EN, Description NO, Driver, Input, Assumption, Calc., Set, Calc. order, Total across periods, Rollup, Format, Style, and Sorting. The table lists 13 measures, including SalesQty, SalesUnitPrice, FreightInPerUnit, FreightIn, CommissionPct, Commission, Sales, CostOfGoodsSoldPct, CostOfGoodsSold, FreightOut, SalesDiscountPct, SalesDiscount, and GrossMargin. Below the measures table, there are two smaller tables: "Dimensions" and "Hist. sel. columns". The "Dimensions" table lists 10 dimension columns like Dim3, Dim4, Market, Product, Project, and Supplier. The "Hist. sel. columns" table shows a single column "Historic1" with various settings.

Multiple input models can be created and published to users. Select a model in the filter-list on the far left to activate buttons and display content.

Note that the most common settings (as outlined below) may also be maintained in the "Input Settings and Administration" workbook that may be convenient to avoid giving users access to model setup:

Budget • 2022 | Input Settings and Administration profitbase

Select a measure from the dropdown list. The currently existing assumptions will display. Maintain assumption values as needed. To see the effect of any change, click Save and the Process for the model in question.

Assumptions are common across models.

Column	Description
Measure	Measure to which the assumption is attached. Automatically set based on filter dropdown selection. Mandatory.
Departm.	Source department. Ranked input. Mandatory.
Product	Source product. Ranked input. Mandatory. Note that if the Product dimension is not visible in the model, any relevant assumption must be defined for the All product level.
Market	Source market. Ranked input. Mandatory. Note that if the Market dimension is not visible in the model, any relevant assumption must be defined for the All market level.
Activity	Source activity. Ranked input. Mandatory. Note that if the Activity dimension is not visible in the model, any relevant assumption must be defined for the All activities level.
Project	Source project. Ranked input. Mandatory. Note that if the Project dimension is not visible in the model, any relevant assumption must be defined for the All projects level.
Currency	Currency for assumption values. Mandatory for measures that have currency, see Define measures for details.

	Note that if there exist legal entities having different home currencies, assumptions must exist for each of the currencies, i.e. there will be no currency conversion when the lookup is done. For legal entity A with home currency EUR, it is expected that an assumption set with currency EUR exists for the lookup to return values.
Monthly period columns	Numeric lookup values for individual months. Column headings will be dynamic and will change as plan rolls forward.
NY Plus 1– NY Plus 5 columns	Numeric lookup values for years beyond next year. Column headings will be dynamic and will change as plan rolls forward. Applicable if long-term planning is done.

Please note that the assumption table will roll forward in time in accordance with the plan rolling forward.

Distribution keys

Distribution keys are specified by the combination of the department, product, and market dimensions.

The dimensional values are selected using the ranked input selector. For details on using the ranked input selector and making rank changes between rows, please refer to [Common functionality](#) for details.

As a general rule-of-thumb, it is advisable not to use too specific distribution keys.

Distribution keys are maintained in the “Output” tab:

Column	Description
Department	Source department. Ranked input. Mandatory
Product	Source product. Ranked input. Mandatory. Note that if the Product dimension is not visible in the model, any relevant assumption must be defined for the All product level.
Market	Source market. Ranked input. Mandatory. Note that if the Market dimension is not visible in the model, any relevant assumption must be defined for the All market level.
Activity	Source activity. Ranked input. Mandatory. Note that if the Activity dimension is not visible in the model, any relevant assumption must be defined for the All activities level.
Project	Source project. Ranked input. Mandatory. Note that if the Project dimension is not visible in the model, any relevant assumption must be defined for the All projects level.
Measure	Source measure. Select from list. Mandatory.
Monthly distribution key weight (heading dynamic)	Numeric values. Mandatory. When distributing a year-total value over monthly periods, the weight given to a specific month is its distribution key weight divided by the sum of the distribution key weights for all the months for that year.
Comments	Optional comment. Note that if a comment is added, the contributor will see the comment when viewing the distribution key of an input row.

Measure to account mapping

For every model, any measure that is expected to generate a P&L transaction must be mapped to an account.

The measure to account mapping is maintained in the “output” tab:

Models Measure Measure fact data Dimension data

Save Refresh New... Open Apply... Process Delete... Check calc.

Operator	Select from list. Mandatory.
Condition	Optional. Special condition to apply when validating whether to execute the rule or not. For example: <ul style="list-style-type: none"> - Month() > 6 indicating that rule will be executed only for transactions with a transaction date with month number greater than 6 (June) - CurrentPeriodValue() > 1000 indicating that rule will be executed if value currently processed is greater than 1000 Operators: <ul style="list-style-type: none"> - Equality: == - Greater than or equal to: >= Greater than: > - Less than or equal to: <= Less than: < - Logical and: && - Logical or:
Account	Mandatory. The account that the target transaction will have.
Target department	Optional. Leave empty if target department should equal the source department. Select from drop down is target department should differ from source department
Comment	Optional comment.

Advanced – engine interface (optional)

Please note that this is an advanced topic that requires in depth knowledge of the Profitbase Planner financial engines.

All output transactions from the models (i.e. those mapped to an account plus those being produced by auto transaction) will be candidates for processing through the financial engines for balance and cash flow.

By default, all measure values are mapped to the Amount field of the transaction table. The transaction table does, however, contain several additional columns that may be desirable to use in certain circumstances to obtain a specific behavior from the financial engine.

At the same time, some output measures may not be desirable to send through the financial engines and should be explicitly excluded.

This can be done in the “Advanced – engine interface” tab (note: has no effect on what is displayed in the “Plan Overview” workbook):

The screenshot displays the 'Advanced – engine interface' configuration window. It includes a top navigation bar with 'Save', 'Refresh', 'New...', 'Open', 'Apply...', 'Process', 'Delete...', and 'Check calc.' buttons. The main area is titled '(ForecastSalesWorkbook) - Product sales' and contains several sections:

- Product sales** (left sidebar)
- Input model** (selected)
- Assumptions**
- Output** (selected, containing the 'Advanced – engine interface' tab)

The 'Advanced – engine interface' tab contains two tables:

P&L trans. - override default mapping of measures to transaction columns; NOTE: applies to P&L transactions from acc. mapping only (not auto transactions)				
	Measure -> P&L transaction	Measure	Transaction column	Comment
1	Sales income	Cogs %	CogsPctOvr	
2	Sales income	Sales income	Amount	
3	Sales income	Sales qty	Qty	
4	Discount	Discount	Amount	
5	Discount	Sales qty	Qty	

Exclude measures from engine			
	Measure	Exclude from engine completely	Exclude auto trans. only from engine
1	Cogs	<input type="checkbox"/>	<input type="checkbox"/>
2	Incoming Freight	<input type="checkbox"/>	<input type="checkbox"/>

Column	Description
Measure -> P&L transaction	Output P&L transaction stemming from the account mapping. Mandatory. Select from list.
Measure	Model measure to obtain value from. Mandatory. Select from list.
Transaction column	Transaction column to map measure value to. Mandatory. Select from list.
Comment	Optional comment.

Override default mapping of measures to transaction columns

In stead of the default mapping of measure value to transaction table Amount field, the mapping can explicitly set. As shown in the example above, for the output transaction of the Sales income measure:

- measure value from “Cogs %” is mapped to transaction column “CogsPctOvr”
- measure value from “Sales income” is mapped to transaction column “Amount”
- measure value from “Sales Qty” is mapped to transaction column “Qty”

The values are taken from the same model based on equality of dimensions and time.

Exclude measures from engine.

If certain output transactions are to be excluded from the financial engines altogether, this can be achieved in the “Exclude measures from engine” table.

Column	Description
Measure	Measure output from the model either through the account mapping or the auto transactions. Mandatory. Select from list.
Exclude from engine completely	Any output transaction for selected measure will be excluded (checked).
Exclude auto trans. only from engine	Optional selection to single out only auto transactions stemming from selected measure to be excluded from engine.
Comment	Optional comment.

6 Data management

Data management comprises of dimension management and source fact data management.

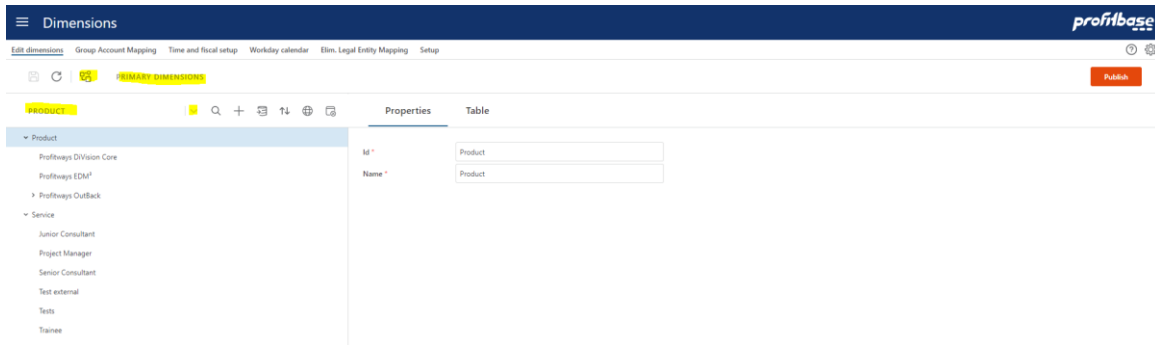

The driver based module uses the department, product, and market dimensions with the optional addition of extra dimensions supplier, project, activity, counterpart and dim1 to dim4.

The driver based source fact data contains the historical data per measure for relevant dimension combinations.

Dimensions

The dimensions available in the driver-based module are Product, Market, Supplier, Activity, Project, and dimensions D1 to Dim4.

Dimensions maintained in the Dimensions workbook, selecting the appropriate dimension:

Note that dimensions in Planner are centrally managed (primary dimension) with the option of maintaining version specific copy using the solution picker.

Maintain as appropriate, save the changes, and then click the “Publish” button to publish. Note that when publishing a dimension, the target versions must be selected.

Source fact data

A simple input tool for maintaining historical data is available in the “Source fact data” workbook:

Select a value in the “Dataset” and “Measure” filter at the top and click the “Refresh” button to enable the save button.

Note that only measures that are set up without a specific “Hist. fact source” are available for input here, see [Define measures](#). Measures with a specific “Hist. fact source” set can be viewed but not changed, they are sourced from the configured source.

Add new rows as needed or paste selection. When pasting data, make sure to paste dimension **ids**. A dropdown will evaluate the id against the corresponding dimension and render the dimension **description**. If no description is rendered, just the id, this indicates that the id does not exist in the dimension.

Column	Description
DepartmentID	Department id. Mandatory.
ProductID	Product id. Mandatory.
MarketID	Market id. Mandatory.
ProjectID	Project id. Optional. If no value is provided, the default value # is set
ActivityID	Market id. Optional. If no value is provided, the default value # is set
SupplierID	Supplier id. Optional. If no value is provided, the default value # is set
Dim1	Dim1 id. Optional. If no value is provided, the default value # is set
Dim2	Dim2 id. Optional. If no value is provided, the default value # is set
Dim3	Dim3 id. Optional. If no value is provided, the default value # is set
Dim4	Dim4 id. Optional. If no value is provided, the default value # is set
CPLegalEntityID	Counterpart legal entity id. Optional. If no value is provided, the default value # is set
Value	Numeric

Year yyyy	4-digit year, for example 2020. Mandatory
Month 1-12	Month number, 1-12. Mandatory

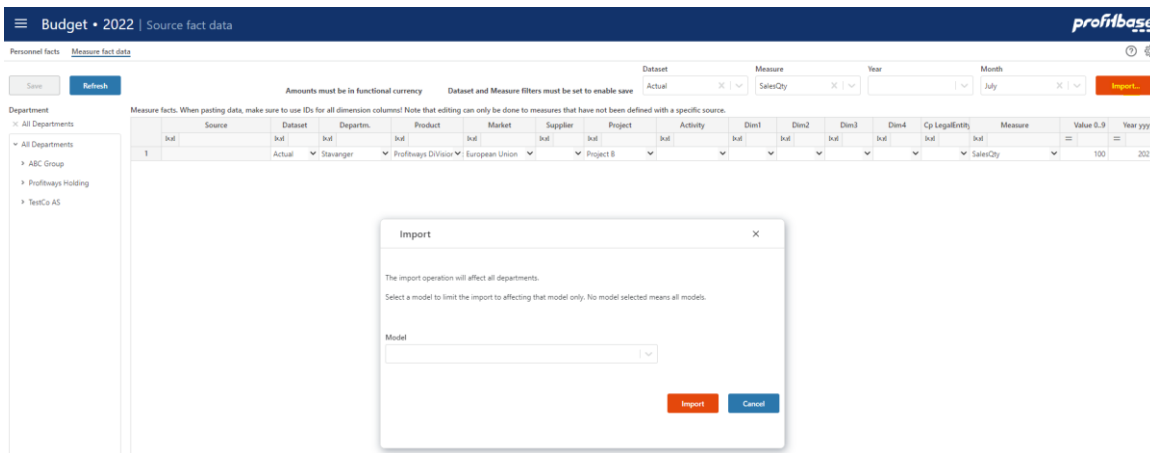

Department, Product, Market, Year and Month are mandatory columns.

Any amounts must be given in the home currency.

Value will default to 0 if no value is provided.

Dimension combinations found in the source and not in the input module for either the last 12 months actuals or any of the (optional) historical reference columns, will automatically be processed into the module on plan rollover.

The input models are updated by clicking the “Import..” button and selecting the appropriate model:

The input models can also be updated manually by clicking the “Apply...” button in the “Models” page of the “Driver based modelling” workbook.
